Thomas Stevens - Games Programmer

Specialising in gameplay mechanics and game AI

Summary:

A focused and dedicated games programmer, who specialises in gameplay mechanics and game AI development, who has recently graduated from the University of Staffordshire with a 1st class degree. Looking to kickstart a career in the games industry and continue to grow their skillset.

Qualifications:

BSc Computer Games Design and Programming (1st Class (Hons))

University of Staffordshire (2021 - 2025)

Technical Skills

- **Programming Languages** - C++ & C# - 5 years experience developing a variety of games and systems with these languages.
- **Game Engine Experience** - Unreal & Unity - 5 years experience developing games using these commercial engines.
- **Visual Scripting** - Blueprint - 4 years experience using blueprint to develop prototypes and systems within games.

Work Experience

- **Multiplayer Programmer - Thinking Brick Studios (August 2025 - Present)**
 - I am currently working as the lead and multiplayer programmer in the Indie company, Thinking Brick Studios. There I am working to convert the codebase of their local multiplayer game - [Pushy Plushy](#) - to become a true online multiplayer title.
- **Programming Tutor - Impact A&C (July 2026 - Present)**
 - Currently working as a programming tutor teaching classes of between 5-10 children & teenagers how to program in python & C#, and make games in Scratch, Unity & Kodu.
- **Games Programmer Intern - 1UP Scheme (June 2025 - August 2025)**
 - Worked as lead programmer to develop a co-op multiplayer party game called [Crab Sticks](#). Responsibilities included managing source control, task assignment for the team and communicating with other department leads and the producers to ensure deadlines were reached..
- **Student Ambassador - University of Staffordshire (September 2024 - August 2025)**
 - Worked as a part of a team to set up, run and host events to promote the university. Responsibilities included answering guest queries at open days, informing UCAS fair attendees on the courses and opportunities our institution had to offer and hosting informative and fun guided campus tours for prospective students and their parents.
- **Games Programmer Intern - Bulldog Studios (September 2023 - March 2024)**
 - Worked as a programmer during a year in industry for the university's in-house studio. Responsibilities included, programming game prototypes in C++ and C#, bug fixing and preparing existing projects for commercial release.

Game Development Experience:

- [Naval Warfare](#) - Created an RTS framework from scratch using C++/Unreal to test AI bots I had developed as part of my dissertation experiment.
- [Little Railways](#) - Developed a physics based train simulator game using Unreal Engine's physics systems and C++
- [Miasma Ashlung](#) - Lead tech and multiplayer programmer in this LAN multiplayer game developed in Unreal using a mixture of C++ and Blueprint in its codebase.
- [Sinsitar](#) - Re-created a classic 80s arcade game from the ground up using C++ and the SMFL graphics library. This included the core game engine components such as input handlers, animation components and UI systems.
